

GLORY

GLR-200 series

Teller Cash Recycler enabling efficient and flexible transactions

GLR-200 supports customer dispense and deposit transactions of any value or denomination, as well as foreign exchange. A choice of storage configurations and options means GLR-200 can meet any cash handling requirement, while complying with cash handling regulations for unfit and suspect notes. By automating cash handling at the teller position, tellers can fully focus on customers and assist with self-operated cash transactions.

GLR-200 enables you to deliver a new branch experience to customers by increasing cash processing efficiency, with more time dedicated to conversations and interaction.

The ideal cash handling solution for financial institutions wanting to deliver an outstanding customer experience in their branches. GLR-200 enables the implementation of cash automation into existing branches, while also offering flexible deployment options for future-branch environments; for example, moving from traditional teller lines to open branch concepts or other customer-interaction models.

This deployment flexibility drives higher customer service levels for routine teller transactions, with in-branch banknote recycling significantly contributing to reduced operating costs.

- Increased branch efficiency and reduced cash handling costs.
- Improved customer satisfaction, with tellers fully focused on delivering a superior service.
- Multiple storage options allow branches to comply with regulations for handling unfit and suspect banknotes.
