## Remote Customer Display

The Remote Customer Display builds trust between you and your customers by clearly displaying count information on either the “Value” or “Premium” display, allowing them to easily confirm the total value and quantity of banknotes counted. Ideal for high volume cash environments, the Remote Display is easy to use, connects to and enhances the functionality of your banknote counters and sorters.

# The Remote Customer Display is a dependable and affordable display. Its compact design allows it to be positioned in any location to meet your unique banknote processing requirements.

## More than just an add-on

The Remote Customer Displays provide a range of options for meeting differing customer and currency requirements. The contemporary and premium design of the devices will complement the working area of any cash handling organisation. In addition, the highly durable polymer housing makes the display ideal for high volume cash processing environments.

The Remote Customer Displays enable an organisation to provide valuable information to a consumer during their transaction. They also provide peace of mind to the internal security functions of the organisation (for example the bank branch, cash centre or casino), by providing visibility of the cash processing procedures that are being performed on Ntegra devices.

## New levels of flexibility

Whether it is via the “Value” display (bright, 7 digit LED) or the “Premium” display (4.3 inch TFT Colour LCD), the displays allow a user to present a range of information from the counter/sorter to meet multiple needs. Information ranging from the basic counting totals to the denomination breakdown can be displayed.

In addition, the new Premium display provides the perfect solution for applications where high value denominations are being counted and a traditional 7 segment display simply does not have enough digits to display the information.

To provide even more flexibility, it is possible to connect more than one type of Remote Customer Display to a cash handling device. This enhances the way transaction information can be shared with a customer and at the same time, within the internal cash-handling environment.

	Value Display	Premium Display
<b>Display type</b>	Seven digit red LED	65K TFT Colour LCD
