CashInsight™ Bridge for Retail

A continuous performance monitoring and remote device management solution

Improve the operational efficiency of your stores with CashInsight Bridge, our remote device management solution for your retail cash automation equipment. Providing the business intelligence you need to be proactive and agile; it offers early warning notifications of potential operational issues; and faster issue resolution to aid users. All resulting in higher operational availability.

CashInsight™ Bridge

Advanced remote device management for improved performance and business intelligence

Remote device management with CashInsight Bridge

CashInsight Bridge is GLORY's remote device management solution which has been designed to deliver enhanced service solutions, increase operational availability and provide real time performance data to the Glory Service Center to drive service improvements for our customers.

By continuously monitoring the performance of retail cash automation devices, Glory can offer early warning notifications of potential operational issues. CashInsight Bridge also provides supplementary data for proactive support, faster issue resolution to aid users and critical product health-checks, resulting in higher operational availability.

The diagnostic capabilities of CashInsight Bridge improve the visibility of key performance indicators and service performance levels relating to individual equipment or an entire fleet. Glory's analysis of equipment status and performance trends supports a proactive service delivery model with pre-emptive service activities and preventative maintenance.

Remote monitoring can also help maximize asset value through central control and deployment of updates that protect retail cash automation equipment, such as currency set updates, configuration optimization and firmware upgrades.

Enhance and maximize the value of retail cash automation

- Early detection of product support need
- Potential for remote recovery of issues to increase product availability
