

CYRIL'S STORY

Name: Cyril

Current Role & Function:

Mechanical Designer

Location: Berne, Switzerland / Himeji, Japan

I started my apprenticeship as a mechanical designer for De La Rue when I was a relatively young and inexperienced 15 year old. From the first day on, I never felt I was treated as just the young guy and really felt part of the team. Everyone was always helpful, open minded and tried to support me.

After 4 years, I passed my apprenticeship and signed a 2 year contract to work part-time as a mechanical designer in Berne. Two days a week I went to school to get the certificate for university entrance.

During this time the company showed a lot of trust in me, involving me in complex and important projects. The main projects I worked on were STC- V5G and V6G development, improvement SDA II and concept design of GDB-X.

After my contract ended, I went travelling around California before undertaking mandatory Swiss

military service for 5 months. This was a good opportunity to improve my English, which is very important in a global company.

After my military service, Glory Global Solutions offered me a secondment in Japan, to work on the next generation recycling/ATM machine for 6 months. I had never imagined that I would work as an expat in Japan, being just 22 years old!

To sum up my experience, I grew up physically and mentally together with Glory. The organisation is interested in supporting young and ambitious individuals like me, to build a strong future. It has been pleasure to work for Glory, with so many interesting, experienced and kind people. Together with a good team spirit anything is possible.
